About Me

Highly proficient Cloud and Devops professional with 5.8 years of experience accelerating software delivery through building and automating scalable systems on **AWS and GCP**. Building CI/CD pipeline through **Jenkins and Gitlab** for efficient software delivery. Proficient in IAC tool **Terraform** for automated provisioning and management. Skilled in containerization with **Docker** and **Kubernetes** for building scalable and resilient applications. Experienced in **Cloud FinOps** for cost optimization, incident management and monitoring with **PagerDuty** and **Grafana** . Familiarity in cloud security. Passionate about learning and integrating cutting edge technologies like AI in Cloud and DevOps to accelerate business growth.

Professional Expérience:

Senior Engineering Lead- Security Solutions @Persistent [Jan 2026]
US Client:

- Specializing in Policy as code tool **Mondoo**, I design and maintain custom policies that validate Terraform plan (JSON), Terraform state, and live GCP infrastructure via enforcing organizational guardrails across the full IaC lifecycle. I integrate these controls into CI/CD to shift security left, blocking non-compliant changes pre-merge and continuously scanning deployed resources for drift.

- Designed and validated security problem statements to assess Mondoo's OOB policy effectiveness across cloud workloads and tested the same using python unit test for terraform.

- **GCP Security**: Continuously monitor cloud infra using GCP Command and control center. Report any vulnerability, misconfiguration to respective teams along with remediation steps

- Experienced in Agile methodologies, actively contributing to sprints by analyzing, prioritizing, and resolving JIRA tickets.

Associate Consultant @Worldline Global Services [Sept 2023-Dec 2025]
Project :

GCP	**Private Cloud(GlobalInfra)**
1. SEPASUITE	1.AMT-PRODSEC1
2. MARS	

- Extensively worked on Google Cloud Platform to implement highly available application across multiple zones and utilizing services such as Compute Engine for virtual machine, **Google Kubernetes Engine** for container orchestration, VPC for network management, **Cloud SQL** for managed relational databases, **Artifact registry** for container image management, **Load Balancers** for traffic distribution, **Cloud IAM** for access controls, Persistent Disk for block storage, **Cloud Storage** for object storage, Secret Manager for managing secrets, **Cloud Armor** for security & Cloud Build for and Cloud Deploy for building and deploying application effectively, **Cloud DNS** for reliable DNS resolution for application, Certificate Manager, Cloud logging and monitoring for real-time insight into application and infrastructure.

- Automated the provisioning and management of GCP infrastructure using Terraform, including writing and maintaining Terraform code, managing state files, executing plans and applies across multiple environments, detecting and resolving infrastructure drift and performing terraform imports, utilizing **terraform modules** for efficiency and collaborate with development team and project architect to implement infrastructure requirement using terraform.

- Experience in managing and deploying applications on **Google Kubernetes Engine**. Proficient in writing **Deployments file** – Update strategy, pod configuration, **liveness/readiness** probe, pv and pvc, request and limit, pod security context , taint and tolerations etc. Creating Service files with familiarity in ClusterIP, Node Port & Load Balancer type. Implemented HPA and **Pod Disruption Budget** to ensure high availability. Implemented GKE Workload Identity to securely access GCP services from within pods.

- Integrated with Secret Manager using External Secret Operator to manage sensitive information. Provisioned LB using **Ingress** and Gateway API components like gateway policies, HTTP Route, health checks etc. Integrate **SSL** policy and Cloud Armor with Ingress using Frontend and **BackendConfig**. Implemented google managed certificate for ELB and provisioned user managed certificate for ILB. Familiar with **Kyverno** Policies.

- Experience in creating **Docker i**mages and containerizing applications, multi stage-builds, docker volumes, docker compose, docker hub etc.

- Experience in implementing **GitLab** CI/CD pipelines, integrating different stages and jobs, gitlab runners (shared and self-managed), executors like shell, docker+machine, vm etc. Understanding of gitlab Kubernetes agent for security, implementing **SAST** and **DAST**, gitlab package registry for artifacts, gitlab container registry for storing images and gitlab autodevops feature.

- Experience in GitOps methodology using **ArgoCD** for continuous deployment and implementing continuous delivery through In-house tool called OPS on Kubernetes cluster. Created and Maintained **HELM** charts, storing them in Nexus and deploying to k8s cluster

- Developed **custom alert rules** for infrastructure and application monitoring on GCP. Utilized Terraform for deployment of alert policies and Monitoring Query Language for defining alert conditions. Configured metric based alerts, log based alerts and uptime check.

- Configured **PagerDuty** components such as Business Service, Technical Services , Service Dependency, Event Orchestration, Escalation Policies , On-Call Schedules, Teams and Team roles to ensure effective incident management and stakeholder collaboration

- Drove **GCP cost optimization** through implementing FinOps principles, including resource rightsizing, deletion of unnecessary resources, instance scheduling, tagging to maintain ownership and visualizing through Looker studio.

- Collaborated with cloud security team to address security vulnerabilities by implementing their recommendations and GCP Security and Command center findings e.g. Deleting access keys which have large permissions, removing roles which are not used, rotating keys.

- Handled team of onshore colleagues, conducting sessions to guide them and creating and maintaining detailed procedure documentation on Confluence. Participate in backup and disaster recovery planning.

List of Active Certifications

AWS	AWS Certified Associate
GCP	GCP Certified Associate GCP Professional Devops Engineer
Kubernetes	Certified Kubernetes Administrator
AI	GCP Generative AI Leader
Monitoring	Prometheus Certified Associates
Incident Management	PagerDuty Practitioner
GitOps	ArgoCD Certified by Codefresh
Cost Optimization	Finops Certified Practitioner
Project Management	PMI Project Management Ready
French Language	DELF A1

DevOps Engineer @Xoriant (On Third Party Payroll): (May 2020 -August 2023)
US Clients
Project:
1. E-Commerce Project: (AWS)
2. Z-TORP (Zero Touch Onboarding ,Remediation & Payment) for Merchants

- Experience in provisioning different AWS services like VPC, EC2, S3, ELB, Auto Scaling Groups, EBS, RDS ,IAM, Security Groups, Route53, EKS, Cloud Trail, SNS etc. Configured S3 buckets with various life cycle policies to archive the infrequently accessed data to storage classes based on requirement. Used IAM for creating roles, users, groups.
- **VPC** and managed **EC2 + ASG + LB** for high availability.
- Configured **S3** with lifecycle rules, versioning, encryption, and replication.
- Managed **IAM** users, roles, and policies with least-privilege access.
- Worked with **RDS** backups, snapshots, and HA setups.
- Experience with **EKS** for Kubernetes workloads and **CloudTrail/CloudWatch** for monitoring and auditing.

- Creating infrastructure on AWS using terraform, using modules to enhance efficiency, terraform plans and imports & provisioning terraform remote backend and locking mechanism AWS S3 bucket and DynamoDB.

- Implemented and maintained Jenkins-driven CI/CD pipelines covering pull/checkout, build, test, and deploy stages, integrated with Git to automate builds and releases. Collaborated with multiple teams to design and optimize Jenkins jobs, leveraging plugins to extend functionality and streamline the development-to-production workflow.

- Containerized Java, Python, and Node.js workloads with Docker; authored and optimized Dockerfiles (including multi-stage builds), configured Docker Compose, and integrated image builds into CI pipelines.

- Created and managed Pods, Deployments, and Services, Secrets, ConfigMaps etc. Enhanced reliability with Kubernetes-based self-healing and auto-scaling (HPA), complemented by health checks and automated recovery. Experience working Route53 and hosted zones where I have orchestrated the route 53 and ALB integration for custom domain implementation in Kubernetes.. Configuring application health checks Livenessprobe and Readinessprobe parameters to monitor containers health

- Creating **Cloudwatch** alerts for instances and using them in Auto scaling launch configurations. Monitoring infrastructure and application status on Grafana Dashboards. Monitor the metric alerts, performance related issues like high CPU utilization, application performance, high Memory utilization. Familiar with AWS **Cloudtrail** for logging and auditing purpose.

- Using **GIT** as version control and GitHub as SCM, resolving merge conflicts, Pull requests. Using feature branching strategy etc. Resolving issues in different environments DEV/UAT/PROD. Using ArgoCD to for seamless continuous deployment.

- Provisioning of Compte engine instances as per requirements. Schedule timely backup of Persistent Disks. Previsioned object storage bucket and configure access over them. Designed and Deployed CI/CD pipelines for application with Cloud Build and Cloud Deploy, automating build , test and deployment processes. Using parallel steps to reduce build times, integrating lint, smoke and Unit test in pipeline process.

- Used Artifact registry to store and scan docker images and build artifacts. Deployed application on GKE with its best practices cluster backup, rbac etc Used IAM roles and permissions to ensure Least Privileged Access. Experience with running the application containers on serverless platform Cloud Run

- Troubleshoot on known/unknown errors and incident ticket. Participate in No-Blame post incident meeting to understand root cause of incident

Technical skills:

Cloud Services	AWS, GCP, Azure
IAAC	Terraform
CI-CD	Jenkins, GitLab, GitHub Actions
Containerization & Orchestration	Docker and Kubernetes, HELM Charts
Continuous Delivery	ArgoCD
Version Control and SCM	Git ,GitHub and GitLab
Monitoring	Prometheus, Grafana

Operating Systems	Linux and Windows
DevSecOps Tools	SonarQube , Snyk, OWASP ZAP
Configuration Management	Ansible
ITSM Tool	ServiceNow, JIRA
Incident Management	Pager Duty
Collaboration Tool	Confluence
Scripting Languages	Shell Scripting
Databases	MySQL
Policy As Code	Mondoo

Declaration:

I hereby declare that all the details furnished above are true to the best of my knowledge.
